

Press release

## Freedom to choose among all battery brands!

# SCANGRIP launches world's first series of work lights with full compatibility across all power tool brands

*Again, SCANGRIP manifests its position as first-mover pushing the boundaries of LED work lights and battery technology. The new SCANGRIP CONNECT work light series is compatible across all leading power tool brands, that is BERNER, BOSCH, BOSCH GREEN, DEWALT, EINHELL, FEIN, FESTOOL, FLEX, HAZET, HIKOKI, INGERSOLL, MAKITA, METABO, MILWAUKEE, RIDGID, SNAP-ON, and WÜRTH - and more to come!*

Today, every power tool brand offers its own individual battery system compatible across different tools but within the same brand. With the new CONNECT work lights, SCANGRIP is rethinking the entire battery pack concept providing complete freedom to use any battery pack regardless of brand preference.

“The SCANGRIP CONNECT series will revolutionize the way we view battery solutions today and we have already received great feedback from the market”, says Anders Borring, CEO of SCANGRIP A/S. “By connecting the world of power tool brands and our innovative work lights, we provide total freedom for the end-user to choose any battery he prefers. In this way, we are creating a much more convenient, flexible, and efficient working life for the professional user,” Anders Borring further explains.

“As Europe’s leading work light specialist, SCANGRIP offers the best and most powerful and durable LED lighting solutions in the market”, Anders Borring claims. “By the new CONNECT work lights we provide access for all professional users to benefit from SCANGRIP’s superior work lights no matter what batteries and power tool brand the user normally prefers.”

### Just connect

At present, the SCANGRIP CONNECT work light range consists of 8 durable work lights designed for the demanding professional user and will soon be supplemented by additional 6 multifunctional work lights. “The development of the SCANGRIP CONNECT series has just begun and we have already a large number of new, functional, and high-performance work lights in the pipeline,” Anders Borring elaborates.

Unique smart CONNECTORS with BATTERY SAFETY SYSTEM are designed for each power tool brand. The CONNECTOR is simply mounted to the work light, the actual battery pack is attached – and you are ready to work! The BATTERY SAFETY SYSTEM protects the battery pack and makes it safe to use. It features an automatic discharge protection, overload protection and temperature surveillance which means you can use your 18V battery pack again and again without it being damaged. At present, CONNECTORS are available for 17 different brands - a number that will be continuously increased.
