

SCANGRIP is Europe's leading manufacturer of innovative LED work lights

Innovative work lights for professionals

From large and extremely powerful floodlights to miniature lights that fit in the palm of your hand, SCANGRIP offers the broadest range available in the market to match any need and ambition for a professional work light. By taking advantage of the latest LED and battery technology, SCANGRIP is constantly pushing the boundaries of LED work lights. As an example, SCANGRIP was the first to develop a floodlight based on COB LED which is now standard all over the market.

POWERFUL CONSTRUCTION SITE LIGHTS

At the upper end of the scale, you will find the new, extremely powerful SITE LIGHT construction lights, which are produced in Denmark. SITE LIGHT comes in two variants providing 40,000 and 80,000 lumen respectively and is a true king of floodlights!

The two SITE LIGHTS are designed to ensure super bright illumination of a large work area. Typically, they are mounted on a 4-5m tripod, but they can also be fixed on cranes or used in other types of working environments where powerful illumination of large areas is needed, for example when installing rafters, doing entrepreneur work, bridge projects, etc.

The SITE LIGHTS are completely dust and waterproof (IP65) and tolerate all kinds of weather conditions from -25° to +40°C. They have a high durability and withstand being dropped without breaking. In addition, the practical, built-in handle makes it convenient to carry the work lights

FLOODLIGHTS BUILT-TO-LAST

In the floodlight range known as the NOVA family, you find a great number of products with different light intensities all the way up to 10,000 lumen. They are all supplied with a light dimmer function which enables you to adjust the light to the specific task. In this way, you can save energy on an everyday basis as you only use the amount of light needed to do the job.

Typically, floodlights are mounted on tripods, but SCANGRIP also offers strong magnet brackets, scaffolding brackets, etc. Such a large range of flexible accessories for LED work lights is not found elsewhere on the market.

SCANGRIP offers cabled NOVA floodlights which require access to power supply and come with up to 5m cable. For professional users who would like a more flexible system,

SCANGRIP also offers floodlights which are both rechargeable and with cable, also known as DUAL SYSTEM 2in1. SCANGRIP's invention of DUAL SYSTEM 2in1 was the world's first combined rechargeable and cabled power supply system for work lights and is another example of SCANGRIP's ability to create innovative solutions. The built-in battery enables you to work efficiently for many hours, and it only takes a second to connect the power cable, whenever you need it.

If you would like a work light with exchangeable batteries, like the concept from power tools, the NOVA range offers two options: The SCANGRIP POWER SOLUTION system or CAS/METABO battery system. The SCANGRIP

SCANGRIP has entered a partnership with Cordless Alliance System (CAS). This collaboration with METABO/CAS is strengthening SCANGRIP's position even further and fulfill its ambition to be the leader in Europe in lighting solutions with attractive battery packs

POWER SOLUTION system is an innovative concept of flexible and reliable power supply. Simply insert a new, fully charged battery, while another battery is charging, or add the charger directly to the lamp to get power supply. The NOVA SPS floodlights also have an integrated battery backup function which prevents you from being without light at any time. The SCANGRIP CAS range is compatible with all 12V-18V batteries from the METABO/CAS battery system, and as something unique, SCANGRIP POWER SUPPLY can also be used for direct power providing unlimited availability to light.

DIFFUSED LIGHT AND COOL DESIGN

With a diffused light, you avoid hard shadows and blinding is reduced. It is ideal for the professional user who requires powerful illumination of the entire work area carrying out any kind of repair, paint, or construction work.

SCANGRIP offers a selection of 360° area lights which are all very powerful and provide a diffused light. The AREA 10 SPS work light, for instance, is designed with a carrying handle, making it extremely easy to move around. It features 360° and 180° illumination and built-in dimmer function – and everything can be controlled remotely through a mobile phone. AREA 10 SPS is both dust and water-proof, IP65, and is supplied with a built-in power bank with USB outlet to charge mobile devices.

The VEGA LITE floodlights are another example of high-quality floodlights providing powerful diffused, non-blinding illumination. The lightweight and durable housing is made of a highly shock-resistant plastic material, constructed for use in the demanding working environment.

As opposed to traditional headlamps with a narrow beam of light, I-VIEW is designed to illuminate your entire workspace. In this way, you avoid turning your head during work and can concentrate on finishing the job.

FLOOD LITE is another series of three compact floodlights in a cool design that are easy to carry around from job to job, providing powerful illumination up to 3500 lumen. The sturdy and durable housing of the FLOOD LITEs is made of a highly shock-resistant plastic material.

HAND-HELD FLOODLIGHTS

When it comes to work tasks performed in narrow and hard to reach areas in the attic, the basement, the furnace room, or other confined spaces, a compact, functional, and powerful handlamp is what you need. The NOVA handlamps have been a huge success and are essentials for the demanding craftsman who needs a work light that are extremely durable and made for work.

NOVA R is a universal work light, providing powerful illumination. It has a flexible handle and can be placed in different positions by built-in magnets.

The ultra-compact NOVA MINI provides 1000 lumen and is incredibly powerful compared to its small size. The special, patented SMART GRIP 4-in-1 system integrates several multi-functions for optimum user-friendliness.

A WORK LIGHT FOR EVERY NEED

SCANGRIP has a work light for all professionals at the construction site including work lights for installation work, electrical work, etc. Handlamps, penlights, flashlights - simply all kinds of work lights are a part of the range.

Especially the I-VIEW headlamp has proven to be the most favored work light by the professionals as it provides powerful illumination while making it possible to have both hands free to work. Supplied with a sensor function, the headlamp can be turned on/off only by waving a hand in front of the lamp -

even when wearing thick gloves. I-VIEW is available in an updated version, providing 400 lumen and with the option of using a power-bank for extra long operating time.

SCANGRIP work lights are available in almost any hardware store in Germany. Check out the full product range at www.scangrip.com/de where you also find contact information on our German sales team.

SCANGRIP transforms input from the market into practical lighting solutions. As a result, the built-in BLUETOOTH light control makes it easy to adjust the light output and turn on/off the lights remotely from a mobile phone.

EUROPE'S LEADING MANUFACTURER OF LED WORK LIGHTS

SCANGRIP is the story of a remarkable transformation from a local blacksmith to Europe's leading manufacturer of LED work lights. The company designs and develops own products and receives strong recognition worldwide for its innovative product design. Production takes place at own lighting factories in Denmark as well as China. SCANGRIP has also invested in a battery pack factory.

The NOVA R handlamp is remarkably handy and provides powerful illumination up to 2000 lumen. It is ergonomically designed for a good grip on the handle.
